METHOD OF AND SYSTEM FOR COMMITTING A TRANSACTION TO A DATABASE

ABSTRACT OF THE DISCLOSURE

A method of and system for committing a transaction to a database. In one embodiment the method comprises initiating a database transaction; creating an electronic record that includes transaction data from the database transaction; executing a rule associated with the record to determine whether an electronic signature is required to connote review and/or approval of the electronic record, and requesting the electronic signature prior to committing the transaction to the database if execution of the rule results in a determination that an electronic signature is required.
